

A HUMAN-LIKE CHATBOT

Anna

- A conversational assistant for answering questions clearly
- Understands user intent, keeps context, and gives helpful replies
- Goal: make technology easier to use through natural conversation

Group 4 · PRT597 Natural Language Processing

“Here to help!”

Max’s digital research assistant

Most chatbots sound scripted

Chatbots are everywhere — but they all sound robotic and scripted. Users get rigid, canned replies instead of a real conversation.

TYPICAL CHATBOT

- Scripted, fixed responses
- Sounds robotic and cold
- Forgets the conversation
- Frustrating when it misunderstands

OUR GOAL: ANNA

- Replies that feel human and natural
- Warm, friendly, conversational tone
- Remembers context across messages
- Asks and clarifies instead of guessing

How we make Anna feel human

DATA SOURCE

maxhoang.com.au

Blog posts & notes

Anna draws her knowledge from Max's published blog posts and notes — real, domain-specific content she can search and cite.

1 Continuous learning

Keep chatting and improve the answers manually over time.

2 Chat memory

Use conversation memory to keep learning and stay in context.

3 Set of rules

Guided rules shape how Anna responds and stays on-topic.

4 Avoid random answers

No guessing — Anna clarifies instead of inventing replies.

How Anna is built: a RAG pipeline

How a question is answered

Key features

Anna in action

What to watch for

- Try a question

“Show me Max’s AI projects”

- Watch a follow-up

Ask “what awards has he won?” — Anna keeps context

- Check the sources

Source buttons link to the real blog posts

- See it stay honest

If unsure, Anna asks instead of guessing

Helpful, but also responsible

Accuracy

Answers Max-specific facts only from real sources — never guesses or invents achievements.

Privacy

Keeps private notes out of search; doesn't ask for or expose sensitive personal data.

Honesty

If unsure, it says so and asks for clarification rather than giving a confident wrong answer.

Challenges & how we handle them

- Should not guess when unsure
- Should ask for clarification
- Should protect private information
- Needs ongoing testing, updates, and better knowledge sources

Human-in-the-loop

Anna doesn't learn blindly. Visitor feedback is reviewed by a human, then approved content and rules are updated — keeping answers safe and accurate.

A website that talks back

- Anna helps people explore Max's work through natural conversation
- She understands intent, uses context, and gives useful, sourced answers
